Dec 2022 - Feb 2024

- Implemented new ordering system to increase efficiency and lower wait time of orders by 20%.
- Assisted in inventory management and restocking ingredients.

EDUCATION

Bachelor Degree of Computer Science

Sep 2022 - June 2026

Tamkang University(淡江大學), Taipei, Taiwan

- Relevant coursework in web development, software development, data management and etc.

PROJECTS

Motion Sensor Alarm Clock

A alarm clock built using an esp32 microcontroller. Integrating IoT, this alarm clock had a motion sensor to confirm whether the user has actually awoken or not.

Eternal Fantasy (Pixel-Art Turn-based RPG)

Using Unity, My team and I made a Turn-based game based on “Final Fantasy”, incorporating a Random Forest AI model for the enemy. My main role in this project was, the pixel artist and UI/UX designer, responsible for visual assets and animation.

Web quiz application

Using Pug template and node.js, my team and I made a Web-based application to simulate “Who wants to be a Millionaire”. Contributed in developing the User Interface and JSON-based data-structure.

ADDITIONAL INFORMATION

- **Languages:** English, Indonesia, Mandarin.
- **Certifications:** TOEFL certificate, freeCodeCamp responsive web-design, alteryx Designer Core.
- **Extracurricular activities:** Badminton, volley, and travelling.
